Water pollution and recycling

Made by: Eszter Szabó

Water pollution

- Unfortunately, water pollution is one of the biggest problems in the world.
- The people pollute the waters in many ways.
- For example, the use of many sprays in the soil or the use of plastic and much more.

Animals

- Plastic is dangerous for aquatic animals because they eat it and they die.
- In my opinio, oil is the most dangerous thing in water pollution because animals get stuck in their feathers-tollak and can't move.

Recycling

- We can recycle it: a plastic, a batteries, a glass, a metal cans, an electronic devices, a paper.
- Recycling is very important in our lives because that way we may don't pollute the environment.

Recycling bins

- If we recycle things, we can reduce-csökkenteni the amount of-összege, mennyisége garbage.
- Recycling bins are very useful because they make recycling easier.

The background is a light blue gradient with several realistic water bubbles of various sizes scattered around the edges. The bubbles have highlights and shadows, giving them a three-dimensional appearance.
